EMILY QHAWEKAZI MARAMANI

PRODUCT ENGINEER | UI/UX DESIGNER | FULL-STACK DEVELOPER

Johannesburg, South Africa | +27 69 518 3174 | emilyqm01@gmail.com

Portfolio: my-portfolio-three-roan-41.vercel.app | GitHub: github.com/Qhawekazii

LinkedIn: linkedin.com/in/emily-maramani-ab0765320

Open to: full-time junior roles · freelance projects · remote, or on-site in Johannesburg

PROFILE

Product engineer who finds the gap people are paying for and closes it: I design the experience, build it end to end and ship it. I have designed and built websites and web apps for a tour operator, a five-team community football club and a training organisation, designed so people can use them on any phone, in any language and at any level of confidence on a screen. Four years in customer-facing roles taught me to listen for the real problem behind a request. Currently completing the Zaio x iHub Full-Stack Web Development Programme and a Higher Certificate in Mobile and Web Development at Rosebank College.

SKILLS

Product & design: UI/UX design, Figma mockups, information architecture, accessibility (WCAG AA), mobile-first and responsive design

Front end: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Vite, React Router, Context API

Back end & data: Node.js, Express, REST APIs, PostgreSQL, Supabase (Auth, Row Level Security, Realtime, Edge Functions), MongoDB, Mongoose, Firebase (Auth, Firestore)

Testing & delivery: Jest, Supertest, Git and GitHub (feature branches, pull requests, code review), GitHub Actions, Vercel, Render

Currently studying: Kotlin, Jetpack Compose and React Native (Rosebank College)

CLIENT AND PRODUCT WORK

iHub Comms — communication platform for iHub Africa

2026

Product Engineer, team CTRL + Create | React, Supabase, PostgreSQL | Private repository (client work)

- Identified that iHub was paying for several platforms that each covered one slice of a learner cohort's needs, while learners still missed deadlines because information was spread across all of them.
- Conceived one invite-only platform to replace them; owned the product and all UI/UX design and mockups.
- Assembled a team, CTRL + Create, to build it through feature branches and pull requests, and built features alongside them.
- Delivered announcements, channels and direct messages, a task board, submissions with mentor feedback, schedule, attendance, course progress and search, with learner, mentor and admin access enforced by database security rules.
- Found and closed a permissions flaw that let any learner make themselves an admin. Pitched the platform to iHub for internal use.

Un De Plus Tours & Transfers — tour operator website

2026

Freelance, solo, existing client | Next.js, TypeScript, Tailwind CSS, Supabase | unde-plus.co.za

- Rebuilt a template site whose booking and contact forms submitted nowhere, so every enquiry was being lost; wired every form to a database with a staff dashboard.
- Designed a trip planner that saves itineraries to customer accounts and exports them as PDF, by email or to Google Docs.
- Opened the site to international visitors with a 19-language switcher and an accessibility widget (read-aloud, text size, high contrast); launched on the client's own domain.

St Frusquin Sporting — community football club website 2026

Freelance, solo | React, Vite, CSS Modules, GitHub Actions | st-frusquin-sporting.vercel.app

- Designed and built the club's first website, organised around its five divisions so parents find their child's team in one tap.
- Cut the first page load from 32 MB to 3.9 MB (88% lighter) for parents on mobile data, and met WCAG AA contrast with an accessible photo gallery.
- Used honest "coming soon" states instead of invented fixtures, and handed over with a guide the club can follow to keep it updated.

PROJECTS

Airbnb Clone — full-stack booking platform emily-airbnbclone.onrender.com

React, Node.js, Express, MongoDB, JWT, Jest

- Built a guest booking site and a host dashboard on one REST API with JWT authentication, bcrypt password hashing and role-based permissions, covered by 43 automated API tests.

Urban Threads — streetwear e-commerce store qhawekazii.github.io/Q-s-Urban-Threads

JavaScript, Firebase Authentication, Cloud Firestore

- Live product catalogue with search, filters and sorting, and a private per-user cart protected by Firestore security rules that validate every cart item.

PawFinder — dog breed explorer Team of four

React, Context API, custom hooks, REST API

- Owned the favourites feature, reusable UI components, QA across screen sizes and the final presentation, working through feature branches and pull requests.

Tic-Tac-Toe · Neon Arena tic-tac-toe-five-ebon-96.vercel.app

React, useReducer

- All game state in a single reducer, with an unbeatable minimax computer opponent and move-history time travel.

EDUCATION

Zaio x iHub — Full-Stack Web Development Programme Mar 2026 – Present

Project-based training in React, Node.js, Express, MongoDB, Firebase, REST APIs, Git workflows, responsive design and deployment.

Rosebank College — Higher Certificate in Mobile and Web Development In progress

Web and Android application development, with a focus on user experience.

PROFESSIONAL EXPERIENCE

iContact BPO — Customer Service Agent 2024 – 2025

- Resolved product and service queries for international customers, diagnosing the real issue behind each request and keeping accurate CRM case records.

Setsoto Office Supplies — Personal Assistant 2022 – 2023

- Managed schedules, email, records and documentation while coordinating with clients, suppliers and internal teams.

I-Talk Financial Services — Call Centre Agent 2021 – 2022

- Supported insurance and medical data-capturing campaigns, verifying confidential information and working toward performance targets.
